SKILLS

Languages

Python

AI/ML

LLM, RAG, Machine Learning, NLP

Framework & Libraries

FastAPI, LangChain, LangGraph, Streamlit

Vector Database

Qdrant, Pinecone, PostgreSQL (pgvector)

Tools & Technologies

OpenAI API, Prompt Engineering, Supabase

SUMMARY

AIML Engineer specializing in LLM-based applications, Retrieval-Augmented Generation (RAG), and AI agents. Experienced in building scalable AI systems using FastAPI, LangChain, and vector databases like Qdrant and Pinecone. Strong background in NLP and semantic search with a focus on developing production-ready intelligent applications.

WORK EXPERIENCE

Internship	Jan 2025 – July 2025
7Span	
Asst. Software Engineer	Sep 2025 – Present
7Span	

EDUCATION

Diploma - Computer Engineering	June 2020 – July 2023
OM Engineering College - Junagadh	
Bachelor Engineering - CSE[AIML]	Oct 2023 – June 2025
New LJ Institute of Engineering and Technology - Ahmedabad	

PORTFOLIO

Resume Chatbot

Role: AIML Developer

Technology: Python, NLP, LLM/AI Agents, FastAPI, LangGraph, Prompt Engineering

Contribution:

- Developed an AI-powered resume chatbot using FastAPI, LangGraph, and LangChain with a multi-agent architecture.
- Integrated OpenAI/Claude LLMs to understand user queries and generate structured resume content.
- Built REST APIs for chatbot interaction and implemented conversational workflows using LangGraph.
- Designed schema-based resume generation with JSON processing and markdown formatting.

Description:

Built an intelligent AI-powered chatbot that understands user inputs and suggests personalized resumes based on their requirements. The system leverages advanced language models and a multi-agent architecture to structure, organize, and present resume content in an interactive conversational format.

Duration:

3 month

Denny Solution

Role: AIML Developer

Technology: Streamlit, Python, OpenAI API, OpenAI GPT Models

Contribution:

- Designed and developed a Retrieval Augmented Generation (RAG) web application using Streamlit, integrating three modules for document processing and intelligent search.
- Implemented a Document Upload Module with PDF ingestion and an indexing pipeline to process and store documents in a secure knowledge base for semantic search.
- Built a Basic Search Module with a fast semantic retrieval system using vector similarity search for efficient document querying.
- Developed an Advanced Deep Search (V2) Module using a two-stage search architecture and intelligent re-ranking to improve search relevance and accuracy.
- Integrated OpenAI and Ragie APIs for language model processing, implemented environment configuration management, and designed a responsive UI with custom HTML/CSS and intuitive navigation.

Description:

An interactive AI-powered document intelligence platform that combines LLM capabilities with semantic search. The application enables users to upload documents, perform both basic and advanced searches using RAG techniques, and retrieve contextually relevant information through multiple search strategies. It is built with a strong focus on user experience, featuring intuitive navigation, real-time processing, and a clean visual design.

Duration:

2 month
